

Mail

In order to enable the Mail system you have to go under Settings -> Mail and fill **ALL** the following fields:

Username: the username for authentication

Email Address: the email address used as From field; if empty is equal to Username.

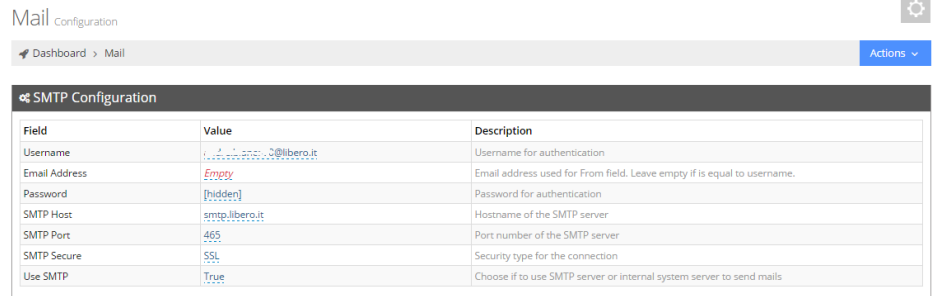

Password: the password for authentication

SMTP Host: the Hostname of the SMTP server

SMTP Port: the Port number of the SMTP server

SMTP Secure: the security type for the connection (SSL, TSL, No secure)

Use SMTP: it is necessary to set it on TRUE. If false, the system doesn't use the SMTP server configured above.

The screenshot shows the 'Mail configuration' page in a web interface. At the top right, there is a gear icon for settings. Below the title, there is a breadcrumb 'Dashboard > Mail' and an 'Actions' button. The main content is a table titled 'SMTP Configuration' with three columns: 'Field', 'Value', and 'Description'. The table contains the following data:

Field	Value	Description
Username@libero.it	Username for authentication
Email Address	Empty	Email address used for From field. Leave empty if is equal to username.
Password	[hidden]	Password for authentication
SMTP Host	smtp.libero.it	Hostname of the SMTP server
SMTP Port	465	Port number of the SMTP server
SMTP Secure	SSL	Security type for the connection
Use SMTP	True	Choose if to use SMTP server or internal system server to send mails

If you use your local mail server for relay (for example POSTFIX or SENDMAIL) please see the file `/var/log/maillog` in order to check that everything is correct
