[Examples & More](#)

[Troubleshooting](#)

The Cally Square menu contains the tool to create and manage IVR applications for your Asterisk based telephony system.

In this section is shown the list of the Cally Square IVR applications already created.

The screenshot displays the Cally Square configuration interface. On the left is a dark sidebar menu with options: Dashboard, Agents, Sip, Queues, Dial Plan, Trunks, Audio, Sounds, Music on Hold, Monitor, Cally Square (highlighted in red), and Analytics. The main content area is titled 'Cally Square configuration' and shows a breadcrumb 'Dashboard > Cally Square'. A '+ New Project' button is visible. Below this is a table with columns: ID #, Name, Description, and Action. The table contains two rows: ID 1, Name 'Demo', and ID 11, Name 'Demo 2'. Each row has 'Edit' and 'Delete' buttons. Above the table is a search bar and a 'Submit' button. The interface also includes a top navigation bar with 'English' and 'Super User' dropdowns, and a settings gear icon.

ID #	Name	Description	Action
1	Demo		Edit Delete
11	Demo 2		Edit Delete

There are some actions that can be done quickly through the Cally Square table:

- Create a New IVR Project
- Delete the IVR application project
- Edit the IVR application project

Each time you get a new IVR channel license you need to login inside the Linux server via ssh and launch the following command to restart the service: `service agisquare restart` You can find the full documentation of Cally Square at this link: <http://www.callysquare.com/documentation/>
