

# Dashboard and RealTime bad performance

Dashboard and real-time section are slower than expected

In some sites with high load of calls and more than **50 queues** and **100 agents**, you might encounter performance issues on the dashboard and real-time sections (low response time or inconsistent data, for example).

From the **2.4.34** release, we added the following options to improve the performance:

- agents and queues list **pagination** in the dashboard monitor
- response time improvement in the real-time agent section
- option to [disable the charts](#) in **Settings - General** section:
